

ABSTRACT OF THE DISCLOSURE

DOCKABLE CELLULAR PHONE

[0038] A system that permits a cell phone user to insert a cell phone, which has a PCMCIA compliant connector, directly into a computer's PC card socket. The cell phone is hinged about a first component and a second component. The first component includes a keypad appropriate for dialing up an Internet service provider (ISP), and the second component is PCMCIA compliant to couple directly in an existing PC socket of the computer. Thus, the cell phone requires no additional cables or modified ports to provide a seamless connection to a dial-up ISP.
